PROFESSIONAL SUMMARY

Aspiring Java Full Stack Developer with project-based experience building microservices and cloud-native applications using Spring Boot, React.js, and REST APIs across MySQL and SQL Server. Skilled in JPA/Hibernate query optimization, API design, and Docker/Jenkins-based CI/CD.

Grounded in core CS fundamentals – operating systems, networking, data structures/algorithms, and multi-threading – with Git-based version control and unit/integration testing (JUnit 5, Mockito); quick learner looking to expand into new stacks.

EDUCATION

Bachelor of Engineering in Computer Science & Engineering 2021 – 2025

Bapuji Institute of Engineering and Technology, Karnataka CGPA: 7.5/10

PROJECTS

Smart E-Commerce Web Application *Spring Boot — React.js — MySQL — Docker*

- Developed a multi-vendor e-commerce platform with role-based authentication using Spring Security and JWT, securing 20+ REST APIs against unauthorized access.
- Applied JPA query optimization, pagination, and indexing strategies to keep API response times low under simulated multi-user load testing.
- Set up Docker and Jenkins CI/CD pipelines for automated builds, and used Git with structured code review practices across feature branches.

Full Stack Banking System *Spring Boot — Spring Security — SQL Server — REST APIs*

- Built core banking workflows including fund transfers, balance enquiry, and transaction history, with SQL Server used for transactional data integrity and ACID-compliant operations.
- Optimized schema design and added targeted indexes, measurably reducing query execution time in local benchmarking against the initial implementation.
- Designed and integrated 15+ RESTful APIs with input validation, centralized exception handling, and a layered architecture for maintainability.

Online Order Management System (Microservices) *Spring Boot — Spring Cloud — API Gateway — MySQL*

- Designed a cloud-native microservices architecture with independently deployable services, applying service decomposition to improve scalability and fault isolation.
- Implemented REST-based inter-service communication with centralized routing and load balancing using Spring Cloud API Gateway.
- Wrote unit and integration tests with JUnit 5 and Mockito, covering core service logic and API contracts.

TECHNICAL SKILLS

Languages: Java, C/C++, SQL, JavaScript

CS Fundamentals: Operating Systems, Computer Networks, Data Structures & Algorithms, Multi-threading

Frontend: React.js, HTML5, CSS3

Backend: Spring Boot, Spring Security, Spring Cloud, REST APIs, JPA/Hibernate

Databases: MySQL, SQL Server

Cloud & DevOps: AWS (EC2, S3), Microservices Architecture, Docker, Jenkins, CI/CD

Testing: JUnit 5, Mockito

Tools: Git, GitHub, Agile/Scrum

CERTIFICATIONS

- Java Full Stack Developer Training – Pentagon Space (2026)
- Technology Job Simulation – Deloitte via Forage (2026)
- Data Analytics Job Simulation – Deloitte via Forage (2025)
